

## Drawing along one vanishing point

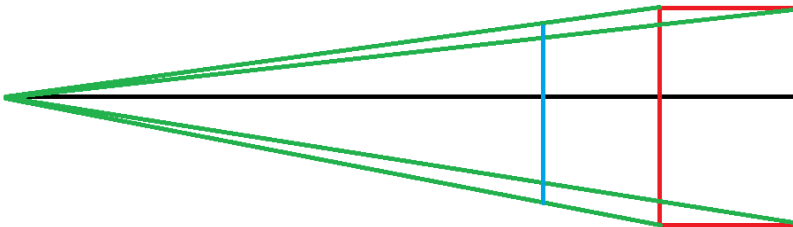

Start with a straight line

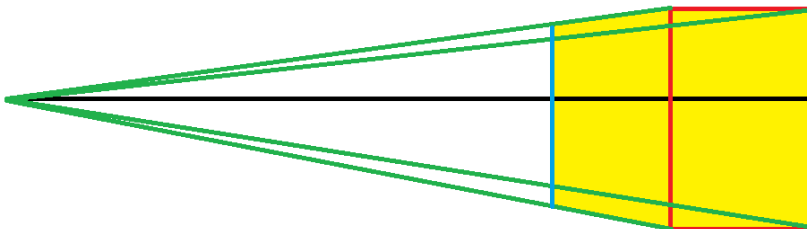

Draw a rectangle

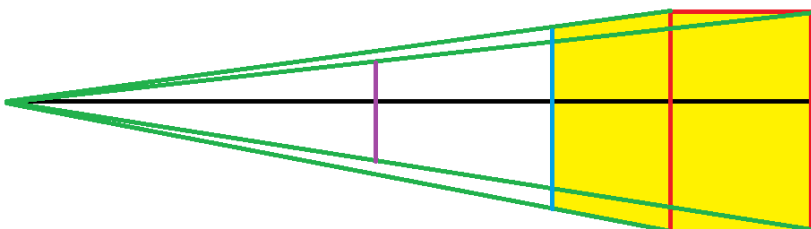

Draw lines from the corners of the rectangle to the vanishing point

Move closer to the vanishing point and draw a vertical line from the top line to the bottom line

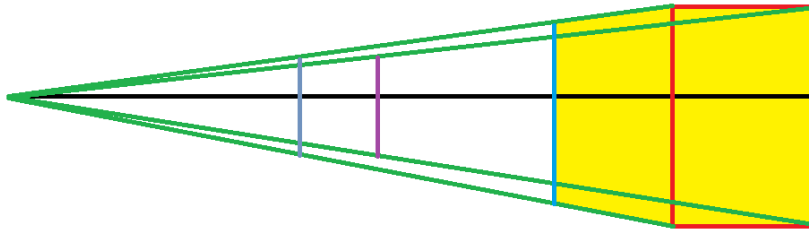

This is your first 3D shape

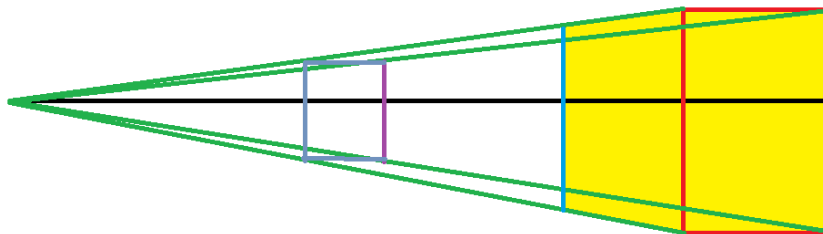

## Drawing along one vanishing point

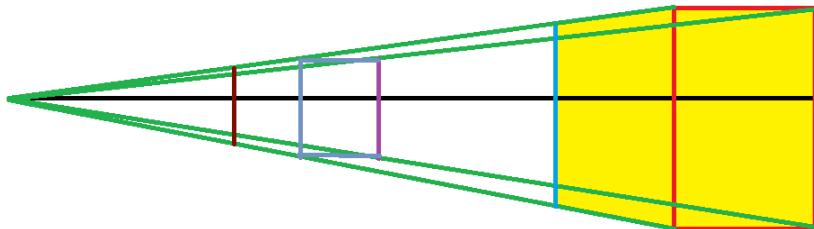

Move closer to the vanishing point and draw a second vertical line between the inside lines

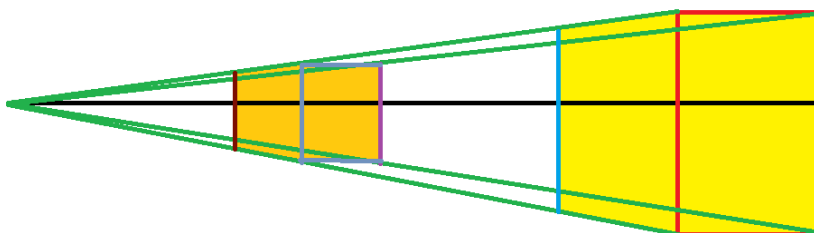

Move closer to the vanishing point and draw a third vertical line between the outside lines

Join these vertical lines up at the top and the bottom to form a rectangle

Move closer to the vanishing point and draw a fourth vertical line between the outside lines

This is your second 3D shape
